Sepsis

Reducing Sepsis Mortality in Ohio Through Early Recognition, Appropriate Intervention

The OHA Board of Trustees identified reducing sepsis mortality in Ohio as one of the key focus areas for OHA and Ohio hospitals. Sepsis is the body's overwhelming and life-threatening response to infection that can lead to tissue damage, organ failure and death. In other words, it's your body's over active and toxic response to an infection. Sepsis impacted an estimated 41,000 Ohioans in 2017. Early recognition and treatment can reduce the morbidity and mortality of sepsis.

CONTINUING EDUCATION

- The link for the evaluation of today's program is:
<https://www.surveymonkey.com/r/Sepsis-1-15-20>
- Please be sure to access the link, complete the evaluation form, and request your certificate. The evaluation process will remain open **two weeks** following the webcast. Your certificate will be emailed to you when the evaluation process closes after the 2 week process.
- If you have any questions please contact Dorothy Aldridge (Dorothy.Aldridge@ohiohospitals.org)

Sepsis

Reducing Sepsis Mortality in Ohio Through Early Recognition, Appropriate Intervention

The OHA Board of Trustees identified reducing sepsis mortality in Ohio as one of the key focus areas for OHA and Ohio hospitals. Sepsis is the body's overwhelming and life-threatening response to infection that can lead to tissue damage, organ failure and death. In other words, it's your body's over active and toxic response to an infection. Sepsis impacted an estimated 41,000 Ohioans in 2017. Early recognition and treatment can reduce the morbidity and mortality of sepsis.

The background features abstract, overlapping geometric shapes in various shades of green, ranging from light lime to dark forest green. These shapes are primarily located on the left and right sides of the slide, framing the central text. The overall aesthetic is clean and modern.

Sepsis care in a Critical Access Hospital

ProMedica Defiance Regional Hospital

PDRH Overview

- We are part of ProMedica Health Systems
- Located in rural NW Ohio
- Level III Trauma Center
- Critical Access Hospital
 - 9 Bed ER
 - 10 Bed Behavioral Health Unit
 - 10 Bed Women's Center
 - 10 Bed Med/Surg Unit
 - 9 Bed ICU
 - 5 Bed OR
 - 4 Bed Express Care (works out of the back of the ER)

Sepsis Data

- Average yearly census is 19,000 patients
 - 13,000 in the ER
 - 6,000 in Express Care
- 2019 treated total 17 patients diagnosed with sepsis
 - 7 admitted
 - 10 transferred

Sepsis Screening

- All patients ≥ 18 years old are automatically screened for sepsis
- The screener identifies those patients at a potential risk for sepsis
- Physician is notified of a positive screen
- Screening tool consists of 5 separate components

Sepsis Tool - Screening Criteria

▼ Sepsis Screening

Triage Sepsis Screening:

Recently Treated Infection (Within the last 30 d... Abnormal Vital Signs Indicating Potential Se... Negative - Initial Sepsis Screen

[Recently Treated Infection \(Within the last 30 days\)](#) taken 1 month ago

Assessment: Systemic Inflammatory Response Syndrome (SIRS)

Criteria: SIRS = Meets 2 or more criteria:

- Temperature less than 36 degrees Celsius or greater than 38.3 degrees Celsius
- Heart rate greater than 90 per minute
- Respiratory rate greater than 20 per min.
- WBC less than 4000 or greater than 12,000 or WBC bands greater than 10%

Assessment: Sepsis

Criteria: Sepsis = Meets 2 or more SIRS criteria and has a presumed or confirmed infection.

Sepsis Tool – Abnormal Vital Signs

Patient presents with
- Choose all that
apply

Hyperthermia Temp > 38.3 C Hypothermia Temp < 36.0 C Tachycardia Rate > 90 Tachypnea Rate >20 SBP < 90 mmHg MAP < 70 mmHg

Assessment: Systemic Inflammatory Response Syndrome (SIRS)

Criteria: SIRS = Meets 2 or more criteria:

- Temperature less than 36 degrees Celsius or greater than 38.3 degrees Celsius
- Heart rate greater than 90 per minute
- Respiratory rate greater than 20 per min.
- WBC less than 4000 or greater than 12,000 or WBC bands greater than 10%

Assessment: Sepsis

Criteria: Sepsis = Meets 2 or more SIRS criteria and has a presumed or confirmed infection.

Sepsis Tool - Diagnosis of Infection

Patient has had recent diagnosis or symptoms - Choose all that apply

- Pneumonia/empyema Urinary tract infection Acute abdominal infection Meningitis Skin/soft tissue infection Bone/joint infection Immunocompromised/terminal illness
- Wound infection Blood stream cath infection Endocarditis Implantable device infection Other infection Resident of Extended Care Facility
- History not suggestive of serious infection

[Skin/soft tissue infection](#) taken 1 month ago

Sepsis Tool - Analysis of Criteria

Initial sepsis screen

 Initial sepsis screen positive. Suspicion of infection is present.

[Initial sepsis screen positive. Suspicion of infection is present.](#) taken 1 month ago

Sepsis Tool - Physician Notification

Physician who was notified of positive sepsis screen

Discuss Positive Screen with Provider and Obtain Sepsis Orders

Obtain order for:

STAT lactic acid, obtain blood cultures prior to antibiotics, CBC with Differential, CMP, PT/PTT, micro-urinalysis with culture, and/or large bore IV x2. Chest X-ray and Abdominal X-ray as indicated.

Sepsis Treatment Plan

Orders

Order Sets

Adult Severe Sepsis Treatment [Personalize](#)

*Note: * See tables A, B, C for additional management recommendations*

To be completed within 3 hours

1. Measure lactate level
2. Obtain all cultures prior to administration of antibiotics
3. Administer broad spectrum antibiotics

4. Administer 30 ml/kg crystalloid for hypotension or lactate ≥ 4 mmol/L (36 mg/dL)

To be completed within 6 hours

5. Apply vasopressors (for hypotension that does not respond to initial fluid resuscitation)

to maintain a mean arterial pressure (MAP) ≥ 65 mm Hg. Patient shall have central venous access.

6. In the event of persistent hypotension after initial fluid administration (MAP < 65 mm Hg) or if initial lactate was ≥ 4 mmol/L, re-assess volume status and tissue perfusion and document findings:

Either: Repeat focused exam (after initial fluid resuscitation) by licensed independent practitioner including vital signs, cardiopulmonary exam, capillary refill evaluation, peripheral pulse, and skin findings.

Or two of the following:

- Measure CVP
 - Measure ScvO₂
 - Bedside cardiovascular ultrasound
 - Dynamic assessment of fluid responsiveness with passive leg raise or fluid challenge
7. Re-measure lactate if initial lactate was elevated*

*Targets for quantitative resuscitation included in the guidelines are CVP of ≥ 8 -12 mm Hg in non -mechanically ventilated patients, and 12-15 in mechanically ventilated patients and Scvo₂ of $\geq 70\%$ and normalization of lactate.

Sepsis Order Set

Orders from Order Sets

Adult Severe Sepsis Treatment

Notify prescriber

Routine, Until discontinued, starting today at 1440, Until Specified
Urine output less than: 0.5 mL/kg/hr
for at least 2 hours after initial fluid resuscitation is completed

Sepsis Protocol Initiated

Order details

- ❗ Pharmacy Consult to review and adjust all antibiotic doses if needed based on patient's renal function

Routine, Once, First occurrence today at 1440

- ❗ Blood gas, arterial

STAT, First occurrence today at 1440

Comprehensive metabolic panel

STAT, First occurrence today at 1440

Protime-INR

STAT, First occurrence today at 1440

APTT

STAT, First occurrence today at 1440

Procalcitonin

Every 6 Hours, First occurrence today at 1440, Last occurrence today at 1800, for 2 occurrences

CBC auto differential

STAT, First occurrence today at 1440

Urinalysis

STAT, First occurrence today at 1440

Lactic acid

STAT, First occurrence today at 1440

Lactic acid (time First Occurrence in four hours)

Every 12 Hours starting in 4 Hours, First occurrence today at 1840, Last occurrence on Wed 1/15 at 0640, for 48 hours

- ❗ X-ray chest 1 view

STAT, 1 time imaging, First occurrence today at 1440
Portable? Yes

Blood culture, peripheral #1

STAT, First occurrence today at 1440

Medication Orders

Medications

▼ Pharmacy Consult

Pharmacy Consult to review and adjust all antibiotic doses if needed based on patient's renal function

 Routine, Once, First occurrence today at 1440

▼ Lung Infection

If Lung Infection present, use Adult Pneumonia Order Set to place antibiotic orders

▼ Community Acquired Urinary Tract Infections

No Allergy: ceftriaxone (ROCEPHIN)

Beta-lactam Allergy: levofloxacin (LEVAQUIN) and gentamicin

▼ Health-care Associated Urinary Tract Infections

No Allergy: cefepime

Beta-lactam Allergy: levofloxacin (LEVAQUIN) and gentamicin

▼ Community Acquired Abdominal/Pelvic Infection

No Allergy: ceftriaxone (ROCEPHIN) and metronidazole (FLAGYL)

Beta-lactam Allergy: levofloxacin (LEVAQUIN) and metronidazole (FLAGYL)

▼ Health Care Acquired Abdominal/Pelvic Infection

No Allergy - Option 1: cefepime and metronidazole (FLAGYL)

No Allergy - Option 2: piperacillin-tazobactam (ZOSYN)

Beta-lactam Allergy: aztreonam (AZACTAM), metronidazole (FLAGYL) and vancomycin

If Septic Shock, consider the addition of gentamicin

If post-operative wound infection consider addition of fluconazole (DIFLUCAN)

▼ Skin/Soft Tissue Cellulitis

No Allergy: cefepime or piperacillin-tazobactam (ZOSYN)

Beta-lactam Allergy: levofloxacin (LEVAQUIN)

If suspecting MRSA, consider addition of vancomycin

▼ Necrotizing Fasciitis

No Allergy: piperacillin-tazobactam (ZOSYN), clindamycin (CLEOCIN), and vancomycin

Beta-lactam Allergy: aztreonam (AZACTAM), clindamycin (CLEOCIN), and vancomycin

Decision for Disposition

- An important element of patient care is knowing who we can admit to our CAH, and who needs tertiary care
- Criteria to consider regarding patient disposition
 - Hemodynamic stability vs instability
 - Potential need for Infectious Disease Specialist
 - Patient co-morbidities
 - Potential need for invasive monitoring
 - Potential need for ventilator support
 - Potential need for specialties or procedures not available at our CAH

Patient Disposition - Admission

- Admission to PDRH
 - Admission under the service of the hospitalist
 - Hand off to receiving unit is a verbal report nurse to nurse
 - Epic allows for one chart throughout the hospital

Patient Disposition - Transfer

- Transferred within ProMedica or outside ProMedica
- Decision concerning facility choice is dependent on patient/family preference, and available resources at accepting facility
- Physician to Physician acceptance
- Hand off to receiving facility is still a verbal report nurse to nurse
- Second hand off (verbal report) between nurse and transport providers

Barriers to sepsis care

- Keeping the nursing staff competent on sepsis care

Barriers to sepsis care

- Keeping the nursing staff competent on sepsis care
- Implementation of sepsis order set by physicians
- Bed availability at a tertiary center
- Availability of transport services in a timely manner
- Delivery of evidence based care in the boarded patients

Questions ??
